Ascender® Uni

The Ascender Unicode 5.0 font program enables companies to deliver products with extensive language coverage through the use of commercial quality Unicode-compliant fonts from Ascender. The Ascender Uni font featured on this page is proportionally spaced (all non-Ideagraph characters). Also available is Ascender Uni Duo, a fixed-width font.

The Ascender Uni program provides an initial font or set of fonts that has full coverage for characters in The Unicode Standard, v2.1 and beyond (supporting most major code pages and character sets in modern use). OpenType layout support is included for Arabic (initial, medial, final, isolate, and required ligature forms, as well as basic mark positioning), and vertical writing for CJK locales (consisting mostly of Latin, symbol, punctuation, and kana glyph variants).
